

## BASEPLATES UPGRADE PACKAGE

For 12-4 & 24-4 Fillers

Images showing retro fitting the small base plates from big base plates

### UPGRADE ITEMS

1. **Small base plates:** New smaller base plate reduces the travel of the can on the seamer pedestal helping to centralize the can quicker and improve can control for seaming. Heat treated and Teflon coated small base plates improves the can handling during seaming and lasts long without forming impressions.
2. **Pedestal covers:** Upon retro fitting big base plates to small base plates, pedestal cover encloses the bottom pedestal and protects it from liquids.
3. **Delrin transfer plate:** Low friction Delrin transfer plates smoothens out can transfer better from filler bowl to seamer station compared to the metal transfer plate.
4. **Transfer plate extension:** Transfer plate extension helps in smooth transition of can to seamer station and covers the gap in changeover from big base plates to smaller base plates.
5. **Seamer turret:** New bolt design of the turrets holds turrets tighter against the post than earlier turrets for better can handling during seaming process.
