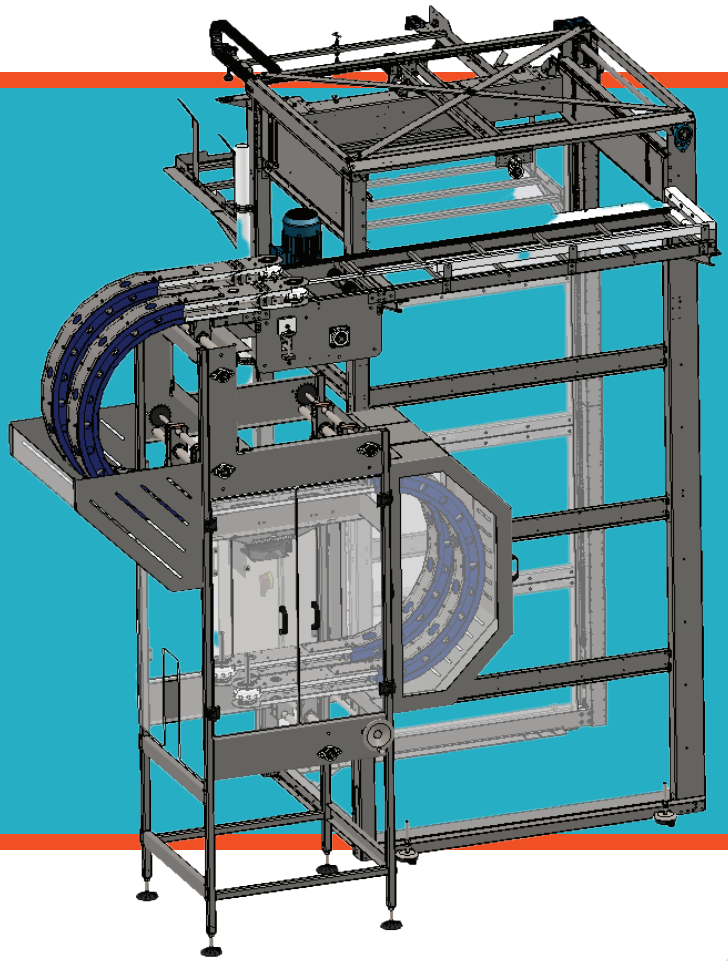
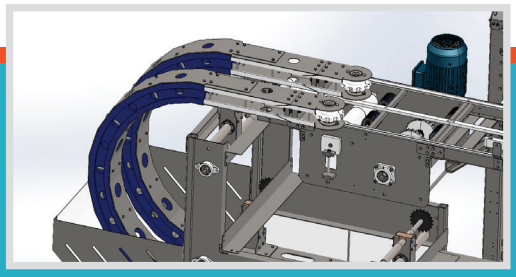
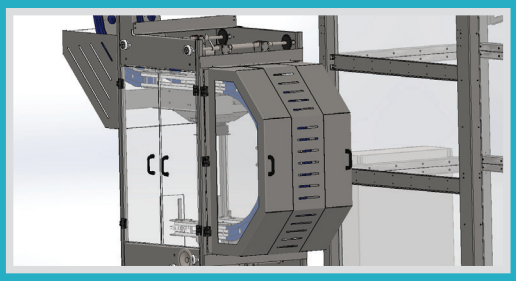
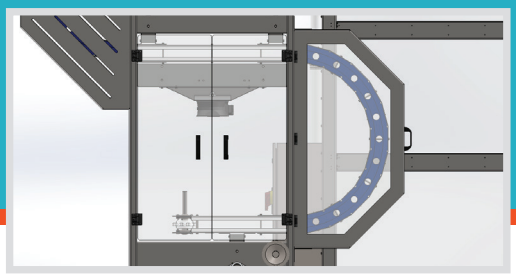
Palmer Beverage Systems

S-GRIP LOWERATOR









HOW IT WORKS

The finger style gripper lowerator transports cans from the depalletizer and lowers them to the filler deck height via an “S” configuration. Two versions are available for optional can inversion if the cans need to be rinsed or date coded prior to filling. The width between the gripper chains is easily adjusted to accommodate all your can size needs.

FEATURES

- 304 stainless steel construction
- Low friction plastics for smooth can handling
- Gripper finger chain for gentle conveying
- Single point adjustment to accommodate all can sizes
- VFD controlled: runs when cans are needed, stops when they’re not
- Excellent date coding capabilities
- Limited maintenance requirements
- Customizable entry and exit heights for integration with existing equipment
- Adjustable: 1/2” - 6” Diameter
